

White Paper

BITGIG TOKEN WHITEPAPER

BitGig token is a BEP-20 coin based on Binance Smart Chain and will be the coin associated with the BitGig Dapp. BitGig dapp will be a decentralized application for freelancers to promote and sell their services to the public, in a decentralized way that will ensure privacy and anonymity across all parties with minimum fees. Integrated safety and security measures will be implemented to verify good conductors of all parties involved.

BITGIG TOKEN CHARACTERISTICS

BitGig token is to be a community based coin focusing on creating value for its holders while creating a revolutionary Decentralized application in an area not so saturated.

Decision making process includes team and community opinions in an equal level and the progress will collaborate with the vision of the biggest believers of the project.

Daily communication on the community group is what will make this project strong and the transparency in decision making will make its holders feel certain for their investment.

The team on their side has -> their coins burned -> Liquidity on Pancakeswap Locked -> contract renounced -> Contract Audit. Anti-dumping system with maximum 1% per transaction to avoid major dumps.

TOKENMICS

3% REWARD to holders.

3% fee for building a strong LP that will stabilize the market and prevent from large dumps 3% for the Operations Fund.

BitGig team decided that it is more valuable for the investors to know that the project has a strong buyback program that can steadily increase the price levels with its features.

The secret of success

THE OPERATION FUND

BitGig token is evolving the Buyback&Burn idea by introducing the Operations Fund and adding another characteristics to the whole concept.

STEP 1: For every transaction a 3% will be collected, converted to BNB and accumulated to a public wallet.

STEP 2: The bnb collected will be stacked daily in high yield decentralized pools (e.g. Automatic Cake staking pool with 80%+ annual APY or BUSDBNB LP with 30%+ APY etc.) in order to ensure the indefinite function of Buyback&burn.

Step 3: When the token faces oversold conditions the Operation fund's gained interest and percentage of the capital will be used to boost the price levels and the burn will establish higher price levels at all times.

The Operations fund's assets will be visible at all times to the community and every transaction will require holders' approval. In addition the Operations Fund can be used for marketing purposes and project progression for creating more value to the holders.

BITGIG Dapp

The BitGig Dapp will be an interactive, user-friendly decentralized application that will enable creators and professionals from different industries to promote their services to individuals that need them. Anonymity and privacy is one of the key factors of our decentralized ecosystem and automated systems will make users feel certain about the credibility of their given service. All payments will be subject of approval from all the parties engaged in the service, so that no disputes are being created. Another great benefit of the platform will be the lower fees compared to all the centralized freelance service providers and the high speed transactions which will allow the freelancer to be paid immediately upon confirmation by the buyer. The BSC network will play key role to these benefits and that is the reason why BitGig Dapp will be launched initially on the specific network. The payment method will be in BNB which aligns with the vision of the project. In later stage, the implementation of another cryptocurrencies as payment methods will be discussed. The profits of the BitGig Dapp will be used for project development, marketing and most importantly buyback of the BitGig coin.
